What Foot Reflexology Can Do For You

Reflexology is based on the premise that our organs have corresponding reflex points on other parts of the body, some of the sensitive points being those on the feet.

When a reflex point is stimulated, it works to balance and normalize not just the corresponding organ itself but also all functional relationships of that organ...*Devaki Berkson, The Foot Book*

Reflexology is the physical act of applying pressure to the feet:

- * with specific thumb, finger and hand techniques
- * without using oil, lotion or cream
- * assessing pressure on the basis of ten longitudinal zones and areas
- * reiterated on the feet in the body's image linking foot to body,
- * with a premise that such work effects a physiological change in the body.

Ionic Foot Baths, Technology and benefits –

How Does a Bio-Cleanse Work?

The human body is like a giant magnet that attracts and holds onto toxins. Heavy metals, partially oxidized fats, unassimilated proteins, cholesterol deposits, uric acid, plaque, lactic acid and the vast array of chemicals that pervade our water, air and food attach themselves in ionized form to joints, organs, arteries, nerves and tissues. These toxins disrupt normal body functions creating an environment for disease, allergies, and immune system problems.

in the Bio-Cleanse process by using an alternating positive and negative ion charge during the same treatment. This important discovery now makes it possible to remove unwanted toxic material from everyone regardless of the electrical charges the toxin may hold.

Often times it is possible to reduce pain, swelling, edema and other symptoms caused by a long-term life style and a chronic toxic buildup in the body. The long-term effectiveness of the ozone detoxification process depends on the other life-enhancing and life-style changes that the patient is willing to make.

Ion generating technology has been around for several decades. It is this technology that is the secret to success
